

NEW IN 2024!

WHEEL PRO

Commercial Stud & Hub Cleaner

This non-impact tool design allows for controlled cleaning without the hammering effect of an impact, which can deteriorate the tool, brushes, and application, as seen in competing products.

Unlike tools that combine stud and hub cleaning, our approach ensures complete servicing, preventing issues such as improper torque and tension. Expect extended tool life and superior cleaning with Wheel Pro's interchangeable brushes. Avoid the risk of damaging the wheel stud or prematurely wearing out your brush by prioritizing hub face cleaning.

- Completely new ergonomic tool and brush design
- Full aluminum anodized body
- 1/2" drive – for use on a drill or low speed air driver
- Newly designed snap-tech brush design allowing for quicker more efficient brush replacement
- Easily switch from stud cleaning to hub/wheel cleaning in a matter of seconds
- Individual brushes for stud and hub cleaning allow for full, proper cleaning of all studs and wheel mating faces
- Two tool bodies available to cover both the automotive and commercial markets

EASY SNAP-TECH DESIGN

In contrast to competing products, Counteract's Wheel Pro & Wheel Pro XL employs our snap-tech design with interchangeable heads for specific tasks.

WHEEL PRO XL

Covers over 90% of all commercial truck wheel-end applications

Wheel Pro XL
WPXL-T22

- Comes with one tool body and 22mm stud cleaning brush
- 6-pack replacement 22mm stud brush inserts
- 6-pack replacement 60mm hub/wheel cleaning discs
- Snap-tech brush technology allows for super quick and efficient brush changing
- Vented tool body allows rust and debris to dissipate while cleaning to avoid tool lock which can break or snap the tool body
